

Fundamental Analogue IC Design: Course Overview & Table of Contents

19 – 23 Jan 2015, University of Limerick

	Day 1	Day 2	Day 3	Day 4	Day5
9.15	1.1 page 6 Semiconductor Basics PN junctions NPN Bipolar formation	2.1 p 75 CMOS Modelling Threshold Voltage Device Equations Large Signal Models	3.1 p 126 Amplifiers: 1 & 2 tr amplifiers; Frequency Response; CMOS vs BiCMOS	4.1 p 182 Passives: R, L, C Matching: Centroiding, .	5.1 p 253 CMOS Logic Types; Fanout; Metastability Tj; Pwr Diss; Θ_{ja} ESD Maps
10.45					
Break					
11.15	1.2 p 23 CMOS Devices; Oxidation Diffusion/Implantation HiK met-gate, FinFET	2.2 p 87 Small-Signal Models; 2nd Order Effects SPICE models & accuracy; EKV,BSIM6	3.2 p 140 Cascodeing; Diff Amps; OTA; PSRR/CMRR	4.2 p 200 Filters: gmC, mosC Filters: Switched Capacitor Circuits	5.2 p 275 Yield; Reliability; 180 →65→22nm Scaling & Manufacturability;
12.45					
Break					
2.00	1.3 LAB p 44 SIMPLer Mask Layout &Process Design-NPN &dual Gate Ox NMOS	2.3 LAB p 100 Schematic Entry; MOS I-V SPICE Simulation	3.3 LAB p 154 SPICE Inverter Amplifier simulations: Gain, BW, delay sims	4.3 LAB p 219 Inverter Layout; LVS;DRC	5.3 LAB p 297 Diff Amp Layout; Matching, Interdigitating
3.30					
Break					
4.00	1.4 p 54 Photolithography; Back-end Dielectrics, & copper, gold metals; MEMS/sensor add-on	2.4 p 109 CMOS Subcircuits: Switches; lev-shift; Current Sources I & V References	3.4 p 166 2-Stage Amplifier Low-Voltage deep sub micron & nanometer analog design	4.4 p 231 Noise & Crosstalk in mixed-signal systems	5.4 LAB cont'd p OP-Amp design cont;d - Gain, Offset, freq response, 1
5.30
